Abhijit Ghosh

Front-End Developer | React, Next.js, TypeScript

Open to Remote Work and International Relocation
Email: a7ghosh@gmail.com
LinkedIn: linkedin.com/in/abhiwillcode
Portfolio: abhiwillcode.vercel.app

PROFESSIONAL SUMMARY

Front-end developer who builds and ships React and Next.js applications, from a deployed real-time WebSocket monitoring platform to a Manifest V3 security extension integrated with the VirusTotal API. Strong command of the modern JavaScript and TypeScript stack, component architecture, asynchronous data handling, and responsive interfaces with Tailwind CSS. Meta-certified (Front-End Developer Professional Certificate) and founder of a YouTube channel with 11M+ views. Open to remote roles and international relocation.

TECHNICAL SKILLS

Languages: JavaScript (ES6+), TypeScript, HTML5, CSS3

Frameworks and Libraries: React, Next.js, React Router, Tailwind CSS, Motion (Framer Motion)

Front-End Engineering: Component Architecture, State Management (useState, useReducer), Client-Side Routing, Form Validation, Responsive Design, Dark Mode Theming, Animation, Asynchronous Data Handling, Loading and Error States

APIs and Real-Time: REST API Integration, WebSockets, Node.js, Asynchronous Polling, Chrome Extensions (Manifest V3)

Tools and Testing: Git, GitHub, Vite, Vitest, Jest, Figma, Vercel, Render, CI/CD

Back-End Fundamentals (in progress): Python, Django, SQL, MySQL

PROJECTS

Patient Sync | Real-Time Patient Intake and Staff Monitoring Platform

Jul 2026 - Present | Next.js 16, React 19, JavaScript, WebSockets, Node.js, Tailwind CSS, Vitest, Vercel, Render

- Engineered a real-time registration platform on Next.js 16 and React 19. A Node.js WebSocket server broadcasts every patient interaction to a live staff dashboard, with no page refreshes.
- Synchronized form values, the active field, validation errors, completion percentage, activity status, and submission timestamps across clients through a structured WebSocket payload, so staff can spot missing or incorrect information as it happens.
- Built real-time field validation, a live statistics dashboard, and a submission workflow, with responsive desktop and mobile layouts and light and dark themes. Organized the UI into 11 single-responsibility components with centralized state. Wrote unit tests with Vitest.

LinkDefender | Chrome Security Extension (Manifest V3)

Feb 2026 - Present | React, Tailwind CSS, Vite, Chrome Extension Manifest V3, VirusTotal API

- Built a Manifest V3 Chrome extension that scans URLs through the VirusTotal API and returns a clear Safe or Dangerous verdict before the user visits a link.
- Implemented asynchronous polling against the VirusTotal analysis workflow and aggregated multi-vendor results into a verdict, with vendor-level detections and safety guidance shown for risky URLs.
- Designed a state-driven React interface with dedicated idle, loading, safe, dangerous, and error states. Added client-side URL validation that blocks invalid input before any network request, and kept API credentials in environment variables.

Code: github.com/abhi-ghosh/LinkDefender

Pokédex | Data-Driven Pokémon Encyclopedia

Jul 2026 - Present | React, JavaScript, Vite, Tailwind CSS v4, Motion, REST API (PokéAPI)

- Built a responsive Pokédex on the PokéAPI with autocomplete search, sprite previews, and full keyboard navigation, plus a move explorer organized by learning method and game version, base stats, abilities, and audio cries.
- Transformed large, deeply nested API responses into UI-ready data with map, filter, some, find, and Promise.all. Implemented version-aware filtering that only shows game versions where a Pokémon actually has moves.
- Structured the app as a service layer and 19 focused components driven by explicit idle, loading, results, and error states, with light and dark theming and Motion layout animations.

Developer Portfolio | Windows 98-Inspired Design System

Sep 2026 - Present | Next.js, React, TypeScript, Tailwind CSS, Motion, Vercel

- Designed and developed a fully responsive Next.js and TypeScript portfolio with a custom Windows 98 design system: extended Tailwind theming, retro 3D borders, hard shadows, custom cursors, and custom keyframe animations.
- Modeled projects, experience, education, skills, and contact data as typed structures rendered through reusable components, using generics, union and literal types, Record, as const, and satisfies, with UI types derived directly from the data.
- Added Motion transitions, custom responsive breakpoints (one, two, and three column layouts), a custom weather module, clipboard integration, and downloadable resumes. Deployed on Vercel.

Little Lemon | Restaurant Ordering and Reservation Application

Jul 2025 - Jul 2026 | React, React Router, JavaScript, HTML5, CSS3

- Developed a multi-page restaurant application with an interactive menu (sorting by price, calories, and name, plus category filtering), a shopping cart with live quantity and total updates, and a reservation system with client-side validation.
- Implemented client-side routing across seven pages, including login and registration, with responsive desktop and mobile layouts. Managed the booking workflow with useReducer and reusable components.
- Capstone project for the Meta Front-End Developer Professional Certificate.

PROFESSIONAL EXPERIENCE

Founder and Video Producer, Pugee (YouTube Channel)

Aug 2023 - Present

- Founded and grew a YouTube channel from zero to 9,800+ subscribers and 11M+ views, and monetized it.
- Owned the full production pipeline: filming, editing, audio processing, and post-production, using DaVinci Resolve, OBS Studio, FL Studio, Reaper, and GIMP.

Client Relations and Operations Assistant, Family-Owned Construction Business

May 2018 - Present

- Presented residential properties to prospective clients and guided them through their purchasing decisions.
- Managed property paperwork and records with a strong focus on accuracy and process consistency.

EDUCATION

Bachelor of Technology (B.Tech), Food Technology

Maulana Abul Kalam Azad University of Technology, Guru Nanak Institute of Technology | Nov 2014 - Nov 2018

CERTIFICATIONS

Meta Front-End Developer Professional Certificate | Meta (Coursera) | Apr 2026 (certificate)

- Covered React, JavaScript, responsive UI development, routing, state management, and front-end architecture.
- Built and completed a full restaurant application capstone using reusable React components and client-side workflows.

Datacom Software Development Job Simulation | Forage | Oct 2026 (certificate)

- Completed a software development simulation based on Datacom's approach to software evaluation, debugging, and improvement: reviewed an existing web application, evaluated customer feedback, and planned targeted improvements.
- Traced a MapLibre navigation failure to incorrect coordinate ordering, implemented the fix, and verified the result. Assessment score: 10/10.

Learn TypeScript | Scrimba (via Coursera) | Sep 2026 (certificate)

Learn Tailwind CSS | Scrimba (via Coursera) | Feb 2026 (certificate)
